Termites

<http://www.nature.com/nature/journal/v450/n7169/full/450487a.html>

*The protozoa live within the termite. These microscopic organisms live in the termite's stomach and break down wood so that the termite can digest it. Each cannot live without the other. The termite leads an existence of both the singular character and an environment.

Social insects in general such as ants and bees
